Introduction

Definition: *A **recommender system** is a system that takes data about a user's past history in a certain industry, such as products they have purchased, movies they have seen, or websites they have visited, and predicts what the user may prefer to purchase or see in the future.*

Machine Learning Concepts

><F23,&#.&<',3,/#3*#<#'<D35."#/'%K3,/#93&.5#K3(23,#F%ED)(&'#*F3&,F&;

Definition: "*A computer program is said to **learn** from experience E with respect to some class of tasks T and performance measure P, if its performance at tasks in T, as measured by P, improves with experience E" (Mitchell, 1997).*

Definition: *A **dataset** is a group of data. It is basically an n-by-m matrix with n rows and m columns. The rows are called **instances**. Instances are basically different occurrences of a situation. The columns are called **attributes**. Attributes are certain details that were recorded during every instance.*
